

LIGHT SOURCE USED FOR LIGHT-SENSING DEVICES

ABSTRACT OF THE DISCLOSURE

A light source is employed for an image capturing apparatus and a light-sensing device of the image capturing apparatus respectively senses a plurality of color regions to form an image captured. The light source comprises a lighting source and a light-guiding means, and the light-guiding means guides a light from the light source to an object to capture an image. An intensity of one color region of the color regions of the light from the light source is higher than that of other color regions.
